

FEATURES

- Touch Dry in 2 minutes at 20°C
- Fully Dry in 15 minutes at 20°C
- To be stored upright in temperatures of 50°C and below.
- Keep away from naked flame and direct heat.
- Shelf life of 72 months if stored at ambient temperatures.

Bright Galvanising Paint

Bright Galvanising Paint, a high-quality bright zinc paint suitable for repairing damaged galvanising, with high adhesion and coverage. It combines good corrosion prevention with metal gloss.

APPLICATION INSTRUCTIONS

1. Remove loose dirt or rust. To achieve a good long-term protection, the surface needs to be dry and free of oil or grease.
2. Apply an even, light coat coating from 25-30mm distance and leave to dry completely.
3. Apply additional coatings if required. Please allow to dry completely between coats and clean after each use by inverting the can and spray to clear the nozzle.
